

ASE - TUTORIAL 4 - REPORT

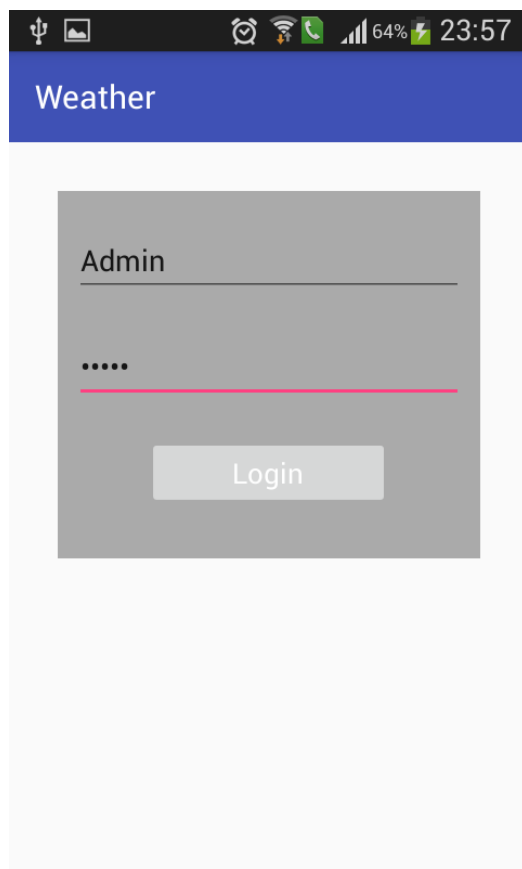

MALLINENI UDAY KIRAN CHOWDARY – 28

Description:

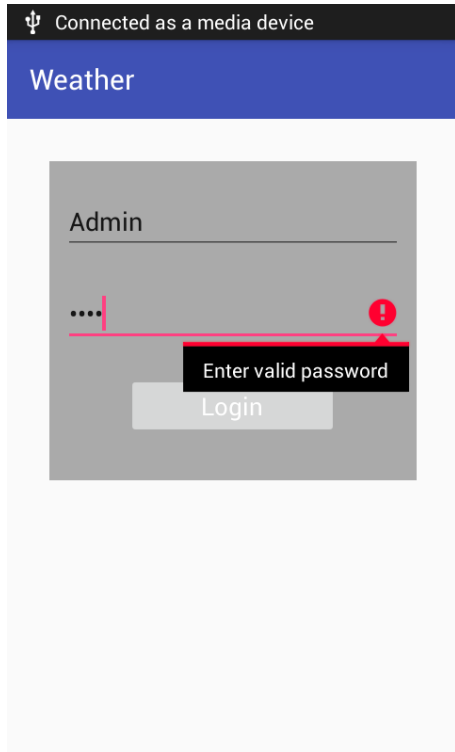

I designed a Android Application Containing Login page and main Page. Main page gives the temperature of the city. Here i used Open Weather API to get the weather details

Login Page:

Here I designed a Login Page. If we enter correct credentials, it will navigate into application main page.

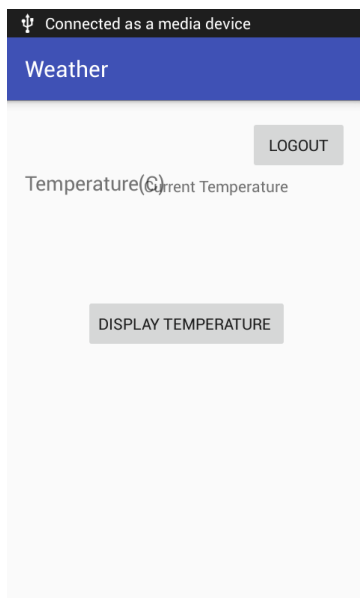

If we enter wrong credentials, it displays alert message.

Main Page:

Main Page contains weather details. If we click on Get Temperature button, it displays temperature in Celsius.

Weather

LOGOUT

Temperature(C)

25.63
